

CLEAN & AMBIENT AIR WITHOUT VIRUSES & BACTERIA

AIR - BOX FLOOR STANDING AIR PURIFIER

Air-Box primarily focus to impart good quality of air rich in oxygen, free from dust, particulates and viruses to minimize impact on health. We focus on the quality of air hygiene to minimize 'illness' and enhance physical and mental state for optimal efficiency to enable complete well-being of an individual.

Air-Box Air Purifier units have been designed for use in clean rooms, laboratories, hospitals or other applications where critical control of room air movement is necessary. Air-Box Air Purifiers are also suitable for less critical applications such as offices, public areas and animal rooms where a flow pattern may be required to minimize / scrub the air of infectious viruses and bacteria. The units will continuously recirculate the ambient room air through a 2 stage filtration system using a G4 Primary filter and H14 Hepa filter giving you a clean airflow pattern that will guarantee 99% of particles are filtered out offering your space continuous cleansing and cycling of air within an enclosed area.

Air-Box Air Purifier units are plug-and-play units suitable for installations in any room. The mobile option eliminates any installation costs, as the unit does not require ducting and runs off a regular 230 v wall socket. The option of self standing or ceiling mounted is available on your request.

Call us for assistance regarding the perfect air purifier for your critical and less critical application! Put your trust in Air-Box and invest in a healthier environment.

ALL PURPOSE AIR PURIFIER
IDEAL FOR CRITICAL & LESS
CRITICAL APPLICATIONS

3 Floor standing APF models available

- APF 4000
- APF 600
- APF 340

High volumetric flow rate

2 Stage Filtration system

Robust & quite operation

Easy installation (Plug-and-play)

Black coated mild steel construction

Custom filter configurations available

APF 4000

APF 600

APF 340
